## MAIN PROJECTS

### Pokedex-X

<https://github.com/Sergiobaz/pokedex-x>

Web application that manages and distributes data extracted from the public PokéAPI.

- Implements Redux, React-router-dom, React-Hook-Form, and vanilla pagination.
- Displays specific information for each Pokémon.

### RickandMortyPage

<https://github.com/Sergiobaz/RickAndMortyPage>

Fetches and lists information about all existing characters from RickandMortyAPI.

- Implements React-Hook-Form and vanilla pagination.
- Organizes all elements according to the universe they belong to within the series.

### Academlo-Meals

<https://github.com/Sergiobaz/Academlo-Meals>

REST API designed for a restaurant. Manages 5 models with their respective endpoints, relationships, validations, etc.
